

*Secure and reliable  
data centre hosting.*

## Co-location hosting services.

York Data Services can offer you the solution to your hosting problems by providing you with the right computing environment for your business application and web servers. With York Data Services you will save space, money and avoid the worry and hassle of monitoring your own servers. We can monitor them for you, 24 hours a day, 7 days a week from our purpose built network operations suite located right next door to the data centre.

We are committed to providing the best possible service for your co-location equipment. Our service range caters for the smallest start-ups through to the largest enterprise organisation. No requirement is too big or too small.

## The right connections

Our hosting experts offer round the clock pro-active monitoring and management of all communication links. This ensures that we can identify any networking issues before they become a problem and allows us to take preventative action if required.

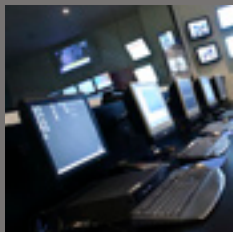

## Peace of mind.

York Data Service's data centre has been purpose built to house your computer equipment which needs to be available 365 days of the year. This subsequently means our security, power management and backup facilities are exceptional.

Security is one of our top priorities and the building benefits from CCTV recording, intrusion detection systems and controlled access to critical systems through a swipe card access system. This ensures that your equipment remains safe. The premises are also patrolled by the onsite campus security to provide even greater peace of mind.

The data centre is environmentally monitored and controlled with inert gas fire suppression systems, redundant air conditioning systems, battery backup power and diesel generator provision. The data centre ensures your servers will be online every minute of the day, every day of the year!

The comprehensive network monitoring we undertake enables us to identify unusual traffic spikes or unusual traffic patterns and alert you to any potential dangers. This helps fine tune both your experience using the service as well as that of your customers accessing your servers from the Internet.

## Backup services

Our hosting experts can perform tape changes for your critical data backups if required. All backup media can be stored onsite in a fire proof media safe or alternatively be collected by yourselves and taken offsite for maximum data protection.

## Extra space.

Our bespoke hosting facilities are based within the York Science Park complex. They are housed in the purpose built IT Centre, which creates a technology hub for businesses across the Yorkshire region. If your servers are taking up valuable office space then we can host them for you in our secure, lockable cabinets which range from 10u to 47u in size. Whatever brand of servers you have, we can provide you with the right solution to serve your needs.

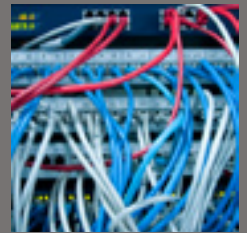

## Extra savings

Secure co-location hosting can be provided in as little as 10u of cabinet space, helping you keep your entry level costs to a minimum. Dedicated power and Internet connectivity, tailored to your specific requirements, are also supplied to your private hosting space ensuring absolutely zero interference.

By being one of Yorkshire's leading business ISP's, we can provide sophisticated end-to-end network solutions. These services enable both large enterprises and growing companies to develop new business opportunities and improve service levels without the added expense of providing hosting in-house.

## Extra flexibility

Our bandwidth-on-demand service also means that whenever you need more bandwidth, all you need to do is simply let us know. This enables you to upgrade and downgrade your hosting to meet your exact needs as your business requirements change. You therefore never have to pay for something you do not require all of the time. Additional bandwidth can be allocated with immediate effect and purchased on a daily basis.

## Why choose York Data Services?

York Data Services is one of Yorkshire's leading business ISP's. By working with the UK's largest infrastructure providers we supply high speed Internet connectivity from 137 locations nationally. Our entire service, from Internet connection through to the final configurations, has been designed with flexibility in mind for you and your business critical servers. You will experience a smooth installation process with as much assistance from us as you require.

We cater for both large and small businesses and we are able to work alongside any existing features that your existing hosting provider may have configured for you. All customers benefit from our flexible pricing structure so that you only buy the services you really need.

Our highly skilled network and server support engineers are on call to provide you with hands on cover when you need it. An invaluable resource if you get locked out of your servers for any reason.

With our carefully managed Internet connections and purpose built hosting environment we are confident that we will be able to exceed your expectations from a co-location hosting provider.

## The next step

With York Data Services you can benefit from a completely managed solution to your Internet hosting requirements.

**If you would like to discuss our co-location hosting further then please contact us. We would be more than happy to show you how our services can work for you. A tour of our facility is also encouraged so you can see firsthand the facility in operation.**
